

(v2) Database Implementation complete (on experimental branch) - 10/14

(v3 - a) Daemon implementation complete - 11/05

(v3 - b) Notify users of simulation status (email? - definitely have this in the database; users can see status in web app) - 11/12

(v4) Pass some *smaller* representation of the simulation output to the database, and from there, visualize it on the frontend so the user can see important results from their simulation - 11/26

(v5) *RAG LLM - for next semester*
